Tactile

Paving communication

Quick to install and out performs concrete

Robust lightweight tiles, the ideal alternative to traditional concrete slabs

Coming in two different variants - Blister and Corduroy, Tactile paving will convey different messages underfoot to visually impaired people of upcoming hazards that they will meet on the streets of Britain.

- Quick and easy to install
- Flexible lightweight tile
- Blister or Corduroy profiles
- No excavation needed
- Colour variants for controlled/uncontrolled crossings
- Conforms to DDA/2005 and DETR guidelines

Hard wearing surface mounted paving

The lightweight tactile paving is made of stone and resin, excellent wearing with built in flexibility. The flexibility enables the tiles to be laid over minor contours and imperfections in the substrate and are easier to cut to shape.

Unlike concrete paving these tiles can be surface mounted using solvent free rubber filled urethane gap filling adhesives. Excellent bond strength with non-slump characteristics, dry (PU) and wet (EP) adhesives are available. The EP variant is moisture tolerant ideal for damp conditions.

With no excavation and lasting five times longer under normal usage than the concrete slabs.

Specifications

Blister - Rows of flat-topped 5mm high blisters

The tactile Blister paving is essential to the safety of visually impaired people navigating our busy streets. This profile underfoot gives warning to the change of a footpath that meets a road, where there are no kerbs to differentiate the two.

The Buff coloured variant is used for where there are controlled crossing points, such as zebra, pelican and puffin crossings. The red variant is put in place where there are uncontrolled crossing points such as side road crossings, kerb to kerb flat road humps and busy cross overs.

Material	Stone and resin composite
Colour	Red or Buff
Tile size	400x400mm or 450x450mm
Profile	Blister
Tile coverage per box of 10 tiles	400x400mm covers 1.6 squared meters or 4 linear meters 450x450mm covers 2 squared meters or 4.5 linear meters
Installation Options	Dry or wet adhesive
DDA 2005 /DETR	Complies to guidelines

Corduroy - Rows of 6mm high rounded bars

The Tactile Corduroy paving is also very important to pedestrians negotiating our footpaths. The profile differs from the Blister profile to convey a different message 'Hazard, proceed with caution'

The Corduroy highlights the presence of specific hazards such as steps, level crossings or the approach to on-street rapid transit platforms (LRT). Comprising of rounded bars running transversely across the direction of the pedestrians travel.

Material	Stone and resin composite
Colour	Charcoal or Buff
Tile size	400x400mm
Profile	Corduroy
Tile coverage per box of 10 tiles	400x400mm covers 1.6 squared meters or 4 linear meters
Installation Options	Dry or wet adhesive
DDA 2005 /DETR	Complies to guidelines
